

**HARMONY SCHOOL OF INNOVATION  
BID RFI 06 RESPONSE  
FEBRUARY 3, 2017**

**Question 1: Roof**

When the project originally bid, some roofers bid the project without adding 1.5” of insulation and other did not. The ones that did bid with the insulation, did their due diligence and cored the roof prior to bidding the project. On sheet A1.6, the roof plan, note #3 states, “ADD INSULATION IF REQUIRED TO THE ENTIRE ROOF SO THAT IT HAS A MINIMUM R-21 R-VALUE.” From discussion with the roofers that cored the roof, a minimum of 1.5” ISO and a .5” cover board will be required to meet the R-21 Value. Can you please have this clarified so that there is no confusion on bid day?

**Response:**

*Roof bid to include an additional 1.5” of ISO rigid insulation and 1/2” cover board on top of the existing insulation to achieve an overall thermal value of R-21.*

**Question 2: Acoustical Insulation:**

Will there be acoustical insulation required above the ceiling tile for sound purposes above the ceiling?

**Response:**

*No acoustical insulation is required above the ceiling tile in the classrooms.*

**Question 3: PA System**

On sheet E1.1, it is not very well defined regarding the PA System / Program and Sound Extension. Note #4 on sheet E1.1 calls out for the speakers to be on 3 zones. My question is, does Harmony want speakers in every classroom / room? Does there need to be a push to talk button in all classrooms so that the teachers have the ability to call the front office, which then requires 2-way speakers?

**Response:**

*There will only be speakers in the hallways, gym, and cafeteria.*

*There will not be a call back button on the speakers.*
